

PRECISION VIBRATING CONVEYOR

Feeds trim blocks, with the same ease as slabs and edgings.

Main frame for the heavy-duty unit is made from 6" ship channel at 16.3 pounds per foot. The Vibrating Conveyor's energy is transferred through the heavy-duty fiberglass support bars to the heavy-duty channel. This secure footing reduces maintenance and insures long life. Shown in heavy-duty. Medium-duty series available for lighter applications.

All components are heavy duty as the spherical roller bearings used in the drive section. Motor under conveyor gives added protection. Unit shown is complete with spout transition, motor and drive.

Sawdust removal screen only permits blocks, slabs and edgings to enter chipper, increasing chipper blade effectiveness and reducing dust. Unit shown is right hand discharge. Left, Bottom or right discharge must be specified by user.
